## **Regent Aircraft Services Is Now Completing SIE Wing Retirement Life Extension Programs For DHC-6-300 Series Twin Otters!**

SIE Wing Retirement Life Extension STC is a cost effective solution versus purchasing new wings

SIE Wing Retirement Life Extension adds up to an additional 33,000 Hours or 66,000 Cycles (whichever occurs first) to your existing wings!

All wings are professionally prepped and packaged for safe transportation to your facility

**TCCA SIE STC# SA97-100**

**FAA SIE STC# SA00364LA**

**If Your DHC-6 300 Series Wings Are Nearing The End Of Their Serviceable Life Contact Regent Aircraft Services Today!**

# How Does It Work?

## **Confirmed Contract and Deposit**

## **SIE Candidacy Inspection**

This involves having an SIE representative visually inspect the wings on the primary structure and their respective fasteners for signs of cracking, corrosion, exfoliation, pitting and distress. This can be done at our facility or yours before sending us your wings.

## **After Candidacy Inspection**

If the wings pass the Candidacy Inspections, the STC modification work can begin. If the Candidacy Inspection was completed at your facility the wings will need to be sent to our facility in Calgary, AB to incorporate the STC modification.

## **Time Line**

Approximately 500 man-hours will be required to incorporate the core STC Modification. Any other repairs, or work required to meet the requirements of the Candidacy Inspection will be determined on a per job basis.

## **Post STC Modification**

We ship your wings back to you once the job is complete. This modification adds two new inspections for continued airworthiness. With the completion of these new inspections, the service life will be extended for up to an additional 33,000 hours or 66,000 cycles (whichever occurs first).

# REGENT TWIN OTTER WINGS FOR SALE

Call or email Doug Gaunt for availability +1-403-291-9445 Ext. 108
